

KONICA MINOLTA

bizhub SECURE

✍ Our service for your peace of mind

How can you make sure your corporate data and valuable company information is safe and protected against data theft? Today's MFPs (multifunctional peripherals) offer a huge range of functions and choices – which unfortunately goes along with a similarly wide range of potential security loopholes.

Konica Minolta's answer to this is the reliable protection of bizhub SECURE: together with you, we determine which of our industry-leading security standards are right for you. With this set of security measures, we give your Konica Minolta bizhub MFP and especially its HDD an extra level of protection to ensure that your data is more than secure – it's bizhub SECURE!

bizhub SECURE – THIS IS IT!

Konica Minolta developed bizhub SECURE to provide customers with the resources they need to protect any document data and information that reside on the bizhub's internal hard drive. After determining the customer's specific needs, Konica Minolta configures several security features of the MFP in order to keep the data, documents and information related to the MFP secure. An individual bizhub SECURE certificate is issued to the customer confirming this protection.

As part of bizhub SECURE, several security options are available:

- Change administrator password
- Enable HDD overwrite temporary data
- Use HDD encryption with individualised password
- Set HDD lock password
- Configure automatic deletion of jobs stored in user boxes

KONICA MINOLTA
